

The A2L and New Armstrong Air Products Training Program is designed to equip HVAC professionals with the latest knowledge and skills required to work with A2L refrigerants and Armstrong Air's newest product line.

This comprehensive training covers the transition to low-GWP A2L refrigerants, emphasizing safety protocols, handling procedures, and regulatory compliance with the Armstrong Air Products.

Participants will be introduced to Armstrong Air's cutting-edge HVAC systems, learning about enhanced efficiency, advanced diagnostics, and installation best practices. The program ensures technicians are prepared to meet industry demands while delivering high-quality service and sustainable solutions.

Seats are limited and attendee must register at least 2-days before the course date selected.

This program includes 2-hour training plus breakfast or dinner depending on the time of the program.
